Bullish momentum: new and ongoing

Quality Momentum scanner | INDIA close 2026-10-30, US close 2026-10-30

New momentum: stage Emerging (50 DMA just crossed or is within 3% of the 200 DMA, price above both, 50 DMA rising), or a golden cross (50 DMA above 200 DMA) within the last 30 sessions.

Ongoing momentum: Confirmed uptrend (price > 50 DMA > 200 DMA, both rising) with an older golden cross.

Ranked by score = 40% quality + 30% growth + 30% momentum, each a percentile within the index. Top names shown.

Each page: 9-month chart with 20/50/200 DMA, the latest golden cross, 52-week high and volume, plus the numbers.

A stock here is not a buy signal by itself: buys need an entry setup (breakout or pullback) and valuation OK. See 'Entry status'. Not investment advice.
